

[How to Define Yourself]

Gameplay Overview

"How to Define Yourself" is a 2D role-playing game. Players will take on the role of a survivor who has lost their memory in a spaceship. They will constantly overcome the obstacles set by mysterious forces, ultimately finding a way to save themselves and define themselves. Only by overcoming the obstacles set by the mysterious person and obtaining all the "definitions" can one achieve victory. If the player dies during the challenge, they will fail. In the game, there are enemies, weapons, and health points.

Controls

WASD corresponds to the movement up, down, left and right.

F can pick up weapons and define things.

J is the attack key.

ESC is used to exit the game.

Art Assets Needed

Player characters and their animations

The enemy

Ground, platform and background

Weapons and props

User Interface (UI)

Victory and defeat scenes

Audio Assets Needed

Background music

Attack sound effect

Character dialogue sound effects

Collecting item sound effects

Player injury or death sound effect

Game Flow

Start the game, then introduce the background, conduct the beginner tutorial, begin the level progression, collect the definitions, complete the challenge given by the mysterious person, and win the game. (More content will be continuously added in the future. For now, this is the simple process.)

Potential Challenges

The main challenges are the seamless transition and design of the levels, the search for materials, the AI behavior of the enemies, collision detection, UI design, and balancing the game difficulty.
